

Project Proposal

SK Production

Disclaimer

The wording of this project proposal was assisted by an AI language model (ChatGPT). The project idea, concept, and described functionality come from me as the student.

General description of the application

SK Production Hub is a portfolio and community website for my DJ/producer identity “SKUPPA” and my record label “SK Production”.

The goal of the application is to have one central platform where:

- I can showcase my own DJ mixes and tracks.
- Fans and visitors can create an account to like/dislike and give feedback.
- Producers and DJs from the community can submit their own mixes/tracks to SK Production for review, so I can decide whether they become public releases on the site.

Each mix will have its own page with an embedded YouTube or SoundCloud player, description, genre, tracklist and cover image. The website will use a modern CSS framework and a responsive layout so it works well on smartphone, tablet and desktop. Logged-in users will be tracked with sessions so they can stay signed in securely.

The platform is aimed at fans, friends, event organisers and upcoming artists who want to follow my work, interact with me and possibly release music via SK Production. Basic privacy and accessibility requirements (GDPR and WCAG) will be taken into account, for example by providing a privacy notice and using sufficient colour contrast.

List of available functionalities

Public (no login required)

- View home page with a highlighted “featured mix”.
- View a list/grid of all public mixes with title, genre, length and thumbnail.
- Filter or search mixes by genre or keyword.
- Open a single mix page with:
 - Embedded YouTube / SoundCloud player
 - Description and tracklist
 - Number of likes/dislikes and comments (read-only for guests)
- View an “About” page with information about SKUPPA, SK Production and the vision of the label.
- View a “Contact” section (for example, a simple contact form or email address for demo questions).

Registered users (login required)

- Create an account with email, username and password (stored securely in hashed form).
- Login and logout; session is used to remember the logged-in user.
- Edit basic profile details (e.g. username, avatar).
- Like or dislike a mix (one vote per user per mix).
- Write, edit and delete own comments/feedback on mixes.
- Submit their own track or mix to SK Production by:
 - Filling in a form with title, artist name, genre and short description
 - Providing a YouTube/SoundCloud link (or upload, depending on implementation)
- See the status of their submission (e.g. “pending”, “approved”, “rejected”).

Admin / SK Production (label owner) functionality

- Secure admin login.
- Create, edit and delete my own mixes:
 - Title, description, genre, date, cover image
 - YouTube or SoundCloud URL to embed the media
- View a list of all community submissions with their details and status.

- Review submitted tracks/mixes and:
 - Approve them → they become public on the website, for example in a “Community releases” or “SK Production artists” section.
 - Reject them → they stay hidden from the public; optionally add a reason/feedback.
- Manage comments (remove inappropriate content).
- Optionally view simple statistics such as most liked mix, number of users and total submissions.
